

FATHIMA ANEES A

Java Developer

Thenkasi, India | +91 8056445290 | fathimakansal@gmail.com | linkedin.com/in/fathima-anees

Availability: Immediate Joiner

PROFESSIONAL SUMMARY

Java Developer with 3+ years of experience developing and supporting enterprise J2EE applications in the airline cargo domain. Hands-on with Core Java, J2EE, JSP, Servlets, Struts, JDBC, JavaScript, SQL and Web Services, with a solid understanding of object-oriented programming, design patterns and Java coding best practices. Experienced across the software development life cycle - analysing user requirements, designing and building reusable and reliable Java code, unit and integration testing, deployment and post-release support. Skilled at identifying bottlenecks and bugs across multiple environments, performing root cause analysis and delivering permanent code-level fixes and enhancements. Certified in AI fundamentals and prompt engineering, and a regular user of AI-assisted development tools in day-to-day coding. Works effectively in Agile Scrum with remote and onsite teams, and flexible to travel.

TECHNICAL SKILLS

Java & Frameworks: Core Java, Java 8, J2EE, JSP, Servlets, Struts, JDBC, Spring, Spring MVC, Spring Boot, Hibernate Fundamentals, Microservices Fundamentals, MVC, Design Patterns

Web Services & APIs: SOAP, SOAP UI, WSDL, REST APIs, XML, Postman

Databases: Oracle, PostgreSQL, SQL, Database Schema Design

Frontend: JavaScript, React

Testing: Unit Testing, Functional, Integration and Regression Testing, Test Case and Test Data Preparation, QA and UAT Support

AI: AI-assisted development tools, Prompt Engineering, Responsible and Ethical AI practices

Version Control & Tools: Git, Bitbucket, Jenkins, GitHub Copilot, Eclipse IDE, IntelliJ IDEA, Jira, Kibana, WebLogic Server, Putty, CyberArk PAM

Methodologies: Agile Scrum, SDLC, Root Cause Analysis, Incident & Change Management, SLA Management

Professional: Stakeholder Communication, Analytical & Problem Solving, Documentation, Continuous Learning

WORK EXPERIENCE

IBS Software, Kochi, India

Jul 2022 - May 2026

Senior Solution Engineer - Turkish Airlines Cargo, AFKLM Cargo (iCargo product suite)

- Analysed user requirements and translated them into system features, then designed, built and maintained efficient, reusable and reliable Java code across the Accounting, Sales and Operations modules of iCargo, an enterprise airline cargo suite used by global airline customers.
- Developed and maintained application modules using Core Java, J2EE, JSP, Servlets and Struts, applying object-oriented programming principles, the MVC design pattern and Java coding best practices.
- Diagnosed and fixed client-reported defects using Core Java, JSP, JavaScript and SQL, performing root cause analysis, distinguishing real defects from expected system behaviour, and delivering permanent code-level fixes and feature enhancements.
- Identified bottlenecks and bugs across development, UAT and production environments, analysing application and server logs in Kibana, WebLogic Server and Putty, and recommended solutions after weighing the trade-offs of each approach.
- Wrote and analysed SQL queries and joins on Oracle and PostgreSQL for data analysis and issue investigation, handled Java-to-database connectivity through JDBC, and supported schema changes that represent core business processes.
- Troubleshoot SOAP web service integrations by tracing WSDL-based request and response failures in SOAP UI and resolving XML data mismatches between systems.
- Prepared test cases and test data and carried out unit, functional, integration and regression testing; supported QA cycles and client UAT before every release.
- Delivered code through Bitbucket pull requests, reviewed Jenkins build logs to fix build failures before merge, and handled patch and release deployments with post-deployment validation.
- Used GitHub Copilot for AI-assisted coding and code suggestions during development, validating every suggestion before committing it.
- Managed stories, defects and releases in Jira across Agile sprints, taking part in sprint planning, estimation, daily stand-ups and retrospectives, and communicating clearly with architects, product owners and remote delivery teams.
- Documented recurring issues, fixes and RCA findings as part of incident and change management to build team knowledge; accessed production environments securely via Putty and CyberArk PAM.
- Provided onsite support in Istanbul for Turkish Airlines Cargo, becoming a go-to point of contact and building strong client trust; also supported AFKLM Cargo operations.

EDUCATION

B.E. Electronics and Communication Engineering

2018 - 2022

Kalaingar Karunanidhi Institute of Technology, Coimbatore, India

CERTIFICATIONS

1. Google AI Essentials - Coursera
2. Prompt Engineering - IBS Software
